

Global Equity Observer

Energy price spike, geopolitical conflict and shifting narratives

INVESTMENT INSIGHT | INTERNATIONAL EQUITY TEAM | April 2026

The first quarter of 2026 started in positive territory for broad global equity markets, but sentiment reversed following the U.S. and Israel strikes on Iran at the end of February. By March end, the MSCI World Index had fallen 6.4% in the month, leaving it down 4% for the quarter. Investors are now assessing the implications of a potential severe energy shock, which could lead to rising inflation expectations and even an increasing risk of stagflation.

Brent crude rose 63% in March—the largest monthly increase on record.¹ The Strait of Hormuz carries around a fifth² of global oil supply, alongside critical flows of liquefied natural gas, helium, petrochemicals and fertilisers. The disruption is widely considered the largest supply shock since the 1970s.

Equity market volatility increased, with daily index moves often dictated by escalation or de-escalation news from the White House. Despite this, overall index levels suggest a fairly complacent reaction so far, with *The Economist*³ calling out “staggering optimism about a bad situation that could get an awful lot worse” and warning that equity investors are the ones that will end up looking “flat-footed”.

However, the current crisis has not yet behaved like a typical growth scare. Energy, which we don't hold, was the only sector to deliver positive returns in March, rising +12%, while defensive sectors, such as consumer staples and health care, down -9% and -8%, respectively, underperformed the overall index as a result of the oil shock and the market's focus on inflation, supply chain disruption and the reduced likelihood of near-term interest rate cuts. As at the time of writing (10 April), markets have recovered the bulk of the March losses on the back of a ceasefire, but the outlook remains very uncertain.

BRUNO PAULSON
Managing Director

“Oil shocks, geopolitical tensions and shifting AI narratives are rattling markets, testing investor confidence in an increasingly volatile environment.”

Intangibles out of favour

The quarter brought more than war. Anthropic's milestone launch in early February of its Claude productivity tools reinforced a narrative that has built over nine months: that AI may accelerate disruption in software and data-related business models. With fears amplified by speculative commentary⁴ around the future of white-collar work, we have seen a sharp rotation in equity markets. Investors have sought shelter in "HALO"⁵ stocks, companies with heavy physical assets and perceived lower risk of technological obsolescence.

Here, we would voice caution: while intangible business models may be under scrutiny, reallocating towards more capital-intensive and cyclical sectors introduces a different set of risks. These businesses are often more exposed to economic volatility, input cost pressures and supply chain disruption—factors that are becoming increasingly relevant in the current environment. As ever, we believe a selective approach is key.

Adaptability and dispassion

The market rotation has created a challenging backdrop for our long-standing focus on capital-light compounders with durable competitive advantages. Importantly, the earnings growth of our portfolio companies has generally remained robust. However, many stocks have faced sharp derating.

Our response has been disciplined and analytical. We have assessed AI-related risks at both the company and industry level, and engaged with management teams. For key holdings, we have supplemented this work by bringing a fresh perspective to the debate through bull and bear analysis conducted by independent team members, not the primary research coverage, ensuring a balanced and unsentimental evaluation of potential scenarios. Where we judge visibility and predictability of earnings—core components of our investment framework—to have weakened, we have taken action, adjusting position sizes or selling positions accordingly. The broad-brushed sell-off has also created opportunities to add to oversold names, where we think the moat is more durable.

Throughout our team's history as quality investors, we have been open-minded where we find reliable compounders. The evolution of the portfolio over the past nine months reflects this. We have reduced exposure to software and

data-exposed stocks in the information technology and financials sectors while increasing allocations to high quality businesses in communication services, consumer discretionary and industrials. Businesses can themselves also evolve. Amazon's transformation of its retail business is an example of a company that now meets our quality criteria, supported by improved economics and a more compelling valuation. At a time when elevated stock dispersion creates a richer opportunity set for stock pickers, we are also alert to idea generation beyond our traditional hunting grounds, while of course retaining our quality focus.

Looking ahead

We face two unfolding narratives which are arguably not reflected in current high valuations: a fast-paced, unpredictable technological revolution that is reshaping entire industries, and a fast-paced, unpredictable conflict that is reshaping a world already reeling from the decline of the rules-based order.

- In AI, so far the market has targeted the more obvious areas, but disruption is likely to extend elsewhere—bringing potential deflation risk to a broader set of industries. Meanwhile, Anthropic and OpenAI's partnership announcements in late February with some of the world's major companies have given credence to Nvidia CEO Jensen Huang's view that hedge funds may have been overzealous in their SAAS (software-as-a-service) short.
- In terms of the war in the Gulf, markets are currently uncertain about its duration. Scenarios range from de-escalation and oil price normalisation to a prolonged disruption and regional escalation driving stratospheric energy prices and economic pain.

The latter might be the trigger that finally tips expensive markets into a broad market drawdown, where quality has typically prevailed. We believe the portfolios' low cyclicality and stronger top-line growth expectations than the index should provide a degree of resilience. Their valuations, measured on a price to free cash flow basis, are now at an unusual discount to the index, which we believe does not reflect the underlying quality and healthy expected top-line growth of the businesses we own.

Risk Considerations

There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market value of securities owned by the portfolio will decline. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this strategy. Please be aware that this strategy may be subject to certain additional risks. Changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, government regulation and economic conditions may adversely affect global franchise companies and may negatively impact the strategy to a greater extent than if the strategy's assets were invested in a wider variety of companies. In general, **equity securities'** values also fluctuate in response to activities specific to a company. Investments in **foreign markets** entail special risks such as currency, political, economic, and market risks. **Stocks of small- and mid-capitalisation companies** carry special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. The risks of investing in **emerging market countries** are greater than risks associated with investments in foreign developed markets. **Derivative instruments** may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks. **Illiquid securities** may be more difficult to sell and value than publicly traded securities (liquidity risk). Non-diversified portfolios often invest in a more limited number of issuers. As such, changes in the financial condition or market value of a single issuer may cause greater volatility. **ESG strategies** that incorporate impact investing and/or Environmental, Social and Governance (ESG) factors could result in relative investment performance deviating from other strategies or broad market benchmarks, depending on whether such sectors or investments are in or out of favor in the market. As a result, there is no assurance ESG strategies could result in more favorable investment performance.

IMPORTANT INFORMATION

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the particular Strategy may include securities that may not necessarily track the performance of a particular index. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

ASIA PACIFIC

Hong Kong: This material is disseminated by Morgan Stanley Asia Limited for use in Hong Kong and shall only be made available to "professional investors" as defined under the Securities and Futures Ordinance of Hong Kong (Cap 571). The contents of this material have not been reviewed nor approved by any regulatory authority including the Securities and Futures Commission in Hong Kong. Accordingly, save where an exemption is available under the relevant law, this material shall not be issued, circulated, distributed, directed at, or made available to, the public in Hong Kong. **Singapore:** This material is disseminated by Morgan Stanley Investment Management Company and should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly, to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore ("SFA"); (ii) to a "relevant person" (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore. **Australia:** This material is provided by Morgan Stanley Investment Management (Australia) Pty Ltd ABN 22122040037, AFSL No. 314182 and its affiliates and does not constitute an offer of interests. Morgan Stanley Investment Management (Australia) Pty Limited arranges for MSIM affiliates to provide financial services to Australian wholesale clients. Interests will only be offered in circumstances under which no disclosure is required under the Corporations Act 2001 (Cth) (the "Corporations Act"). Any offer of interests will not purport to be an offer of interests in circumstances under which disclosure is required under the Corporations Act and will only be made to persons who qualify as a "wholesale client" (as defined in the Corporations Act). This material will not be lodged with the Australian Securities and Investments Commission.

JAPAN

For professional investors, this material is circulated or distributed for informational purposes only. For those who are not professional investors, this material is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. ("MSIMJ")'s business with respect to discretionary investment management agreements ("IMA") and investment advisory agreements ("IAA"). This is not for the purpose of a recommendation or solicitation of transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIMJ to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIMJ accepts such commission. The client shall delegate to MSIMJ the authorities necessary for making investment. MSIMJ exercises the delegated authorities based on investment decisions of MSIMJ, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIMJ cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This material is disseminated in Japan by MSIMJ, Registered No. 410 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
